1. INTRODUCTION

1.1 Purpose

This manual provides the information necessary to repair, calibration, description and download the features of this model.

1.2 Regulatory Information

A. Security

Toll fraud, the unauthorized use of telecommunications system by an unauthorized part (for example, persons other than your company's employees, agents, subcontractors, or person working on your company's behalf) can result in substantial additional charges for your telecommunications services. System users are responsible for the security of own system.

There are may be risks of toll fraud associated with your telecommunications system. System users are responsible for programming and configuring the equipment to prevent unauthorized use. The manufacturer does not warrant that this product is immune from the above case but will prevent unauthorized use of common carrier telecommunication service of facilities accessed through or connected to it. The manufacturer will not be responsible for any charges that result from such unauthorized use.

B. Incidence of Harm

If a telephone company determines that the equipment provided to customer is faulty and possibly causing harm or interruption in service to the telephone network, it should disconnect telephone service until repair can be done. A telephone company may temporarily disconnect service as long as repair is not done.

C. Changes in Service

A local telephone company may make changes in its communications facilities or procedure. If these changes could reasonably be expected to affect the use of the phones or compatibility with the net work, the telephone company is required to give advanced written notice to the user, allowing the user to take appropriate steps to maintain telephone service.

D. Maintenance Limitations

Maintenance limitations on the phones must be performed only by the manufacturer or its authorized agent. The user may not make any changes and/or repairs expect as specifically noted in this manual. Therefore, note that unauthorized alternations or repair may affect the regulatory status of the system and may void any remaining warranty.

1. INTRODUCTION

E. Notice of Radiated Emissions

This model complies with rules regarding radiation and radio frequency emission as defined by local regulatory agencies. In accordance with these agencies, you may be required to provide information such as the following to the end user.

F. Pictures

The pictures in this manual are for illustrative purposes only; your actual hardware may look slightly different.

G. Interference and Attenuation

A phone may interfere with sensitive laboratory equipment, medical equipment, etc. Interference from unsuppressed engines or electric motors may cause problems.

H. Electrostatic Sensitive Devices

ATTENTION

Boards, which contain Electrostatic Sensitive Device (ESD), are indicated by the  sign. Following information is ESD handling:

- Service personnel should ground themselves by using a wrist strap when exchange system boards.
- When repairs are made to a system board, they should spread the floor with anti-static mat which is also grounded.
- Use a suitable, grounded soldering iron.
- Keep sensitive parts in these protective packages until these are used.
- When returning system boards or parts like EEPROM to the factory, use the protective package as described.

1.3 Abbreviations

For the purposes of this manual, following abbreviations apply:

APC	Automatic Power Control
BB	Baseband
BER	Bit Error Ratio
CC-CV	Constant Current – Constant Voltage
DAC	Digital to Analog Converter
DCS	Digital Communication System
dBm	dB relative to 1 milli watt
DSP	Digital Signal Processing
EEPROM	Electrical Erasable Programmable Read-Only Memory
ESD	Electrostatic Discharge
FPCB	Flexible Printed Circuit Board
GMSK	Gaussian Minimum Shift Keying
GPIO	General Purpose Interface Bus
GSM	Global System for Mobile Communications
IPUI	International Portable User Identity
IF	Intermediate Frequency
LCD	Liquid Crystal Display
LDO	Low Drop Output
LED	Light Emitting Diode
OPLL	Offset Phase Locked Loop

1. INTRODUCTION

PAM	Power Amplifier Module
PCB	Printed Circuit Board
PGA	Programmable Gain Amplifier
PLL	Phase Locked Loop
PSTN	Public Switched Telephone Network
RF	Radio Frequency
RLR	Receiving Loudness Rating
RMS	Root Mean Square
RTC	Real Time Clock
SAW	Surface Acoustic Wave
SIM	Subscriber Identity Module
SLR	Sending Loudness Rating
SRAM	Static Random Access Memory
PSRAM	Pseudo SRAM
STMR	Side Tone Masking Rating
TA	Travel Adapter
TDD	Time Division Duplex
TDMA	Time Division Multiple Access
UART	Universal Asynchronous Receiver/Transmitter
VCO	Voltage Controlled Oscillator
VCTCXO	Voltage Control Temperature Compensated Crystal Oscillator
WAP	Wireless Application Protocol

2. PERFORMANCE

2.1 Product Name

C320i : EGSM/GSM850/DCS/PCS

(GPRS Class 12 / EDGE Class 12)

2.2 Supporting Standard

Item	Feature	Comment
Supporting Standard	EGSM/GSM850/DCS1800/PCS1900 with seamless handover Phase 2+(include AMR) SIM Toolkit : Class 1, 2, 3, C-E	
Frequency Range	EGSM TX : 880 – 915 MHz EGSM RX : 925 – 960 MHz GSM850 TX : 824 – 849 MHz GSM850 RX : 869 – 894 MHz DCS1800 TX : 1710 – 1785 MHz DCS1800 RX : 1805 – 1880 MHz PCS1900 TX : 1850 – 1910 MHz PCS1900 RX : 1930 – 1990 MHz	
Application Standard	WAP 2.0, JAVA 2.0	

2.3 Main Parts : GSM Solution

Item	Part Name	Comment
Digital Baseband	ESC6270 : Qualcomm	
Analog Baseband	ESC6270 : Qualcomm	
RF Chip	ESC6270 : Qualcomm	

2. PERFORMANCE

2.4 HW Features

Item		Feature	Comment
Form Factor		Slide type	
Battery		1) Capacity Standard : Li-Ion, 900 mAh	
		2) Packing Type : Soft Pack	
Size		Standard : 91 x 63 x 15.9 mm	
Weight		115.6g	With Battery
Volume		TBD	
PCB		Stag type, 10 Layers , 0.8t	
Stand by time		Up to 300 hrs	@ Paging Period 5
Charging time		Up to 3 hrs	@
Talk time		2G Up to 3.4hr	@ Tx=Max(2G)
RX sensitivity		EGSM : -105 dBm GSM850 : -105 dBm DCS 1800 : -105 dBm PCS 1900 : -105 dBm	
TX output power	GSM/ GPRS	EGSM : 33dBm GSM850 : 33 dBm DCS 1800 : 30 dBm PCS 1900 : 30 dBm	Class4 (EGSM) Class4 (GSM850) Class1 (PCS) Class1 (DCS)
	EDGE	GSM 900 : 27 dBm GSM 850 : 27 dBm DCS 1800 : 26 dBm PCS 1900 : 26 dBm	E2 (GSM900) E2 (GSM850) E2 (PCS) E2 (DCS)
GPRS compatibility		GPRS Class 12	
EDGE compatibility		EDGE Class 12	
SIM card type		Plug-In SIM 3V /1.8V	
Display		2.4" TFT QVGA landscape	
Built-in Camera		2M FF SOC Camera	
Status Indicator		Yes	
Keypad			
ANT		Main : Internal Fixed Type	
System connector		5 Pin	
Ear Phone Jack		3.5Phi, 4 Pole, Stereo	
PC synchronization		Yes	
Memory		NAND Flash : 2Gbit SDRAM : 1Gbit	
Speech coding		FR, EFR, HR, AMR	
Data & Fax		Built in Data & Fax support	
Vibrator		Built in Vibrator	
BlueTooth		V2.1 + EDR	
MIDI(for Buzzer Function)		SW Decoded 64Poly	

2. PERFORMANCE

Music Player	MP3/AAC/AAC+/WMA	
Video Player	PEG4, H.263,H.264 30fps@QVGA WMV 15fps@QCIF	
Camcorder	MPEG4, 15fps@QVGA	
Voice Recording	Yes	
Speaker Phone mode Support	Yes	
Travel Adapter	Yes	
CDROM	No	
Stereo Headset	Yes	
Data Cable	Yes	
T-Flash (External Memory)	Yes	

2. PERFORMANCE

2.5 SW Features

Item	Feature	Comment
RSSI	0 ~ 7 Levels	
Battery Charging	0 ~ 3 Levels	
Key Volume	0 ~ 7 Level	
Audio Volume	1 ~ 20 Level	
Time / Date Display	Yes	
Multi-Language	Yes	English / Chinese Trad. / Chinese Simp. / Thai / Korean / Malay / Indonesian / Vietnamese
Quick Access Mode	Dialing / Contact / Menu / Message / Camera	
PC Sync	Yes	PC suite 4
Speed Dial	Yes	Voice mail center -> 1 key
Profile	Yes	not same with feature phone setting
CLIP / CLIR	Yes	
Phone Book	Name + 5 Numbers + 1 Memo + 2 e-mail + 3 Group Select + Picture + Ringtone + Anniversary day	1000 + SIM
Last Dial Number	Yes	Total Call DB Max 100 LDN (SIM) N/A
Last Received Number	Yes	Total Call DB Max 100 LDN (SIM) N/A
Last Missed Number	Yes	Total Call DB Max 100 LDN (SIM) N/A
Search by Number / Name	Name and Number	
Group	Yes	30
Fixed Dial Number	Yes	
Service Dial Number	No	
Own Number	Yes	Read only (add/edit/delete are not supported)
Voice Memo	Yes	Support voice recorder
Call Reminder	Yes	
Network Selection	Automatic	
Mute	Yes	
Call Divert	Yes	
Call Barring	Yes	
Call Charge (AoC)	Yes	
Call Duration	Yes	
SMS (EMS)	Yes (1000+SIM)	EMS : Release4 (Except Text align)
SMS Over GPRS	Yes	
EMS Melody / Picture Send / Receive / Save	Yes (Receive only)	
MMS MPEG4 Send / Receive / Save	Yes	
Long Message	MAX 1000 Characters	SMS 7pages

2. PERFORMANCE

Cell Broadcast	Yes	
Download	Over the WAP	
Game	Yes	
Calendar	Yes	
Memo	Yes	100
World Clock	Yes	
Unit Convert	Yes	
Stop Watch	Yes	
Wall Paper	Yes	
WAP Browser	Over WAP 2.0	Obigo
Download Melody / Wallpaper	Yes	Over WAP
SIM Lock	Yes	Operator Dependent
SIM Toolkit	Yes	R99
MMS	Yes	Obigo +LG MMS Client
EONS	No	
CPHS	Yes	V4.2
ENS	No	
Camera	Yes	2M FF
JAVA	Yes	CLDC V1.1 / MIDP V2.1 Download Over WAP
Voice Dial	No	
IrDa	No	
Bluetooth	Yes	BT 2.1+EDR HFP/HSP/A2DP&AVRCP /OPP/BPP/PBAP/SPP/
FM radio	Yes	
GPRS	Yes	Class 12
EDGE	Yes	Class 12
Hold / Retrieve	Yes	
Conference Call	Yes	Max. 6
DTMF	Yes	
Memo pad	Yes	
TTY	No	
AMR	Yes	
SyncML	No	
IM	Yes	JAVA midlet (neustar)
Email	Yes	

2. PERFORMANCE

2.6 HW SPEC.

1) GSM transceiver specification

Item	Specification
Phase Error	Rms : 5° Peak : 20°
Frequency Error	GSM : 0.1 ppm DCS/PCS : 0.1 ppm
EMC(Radiated Spurious Emission Disturbance)	GSM/DCS : < -28dBm
Transmitter Output power and Burst Timing	GSM : 5dBm – 33dBm ± 3dB DCS/PCS : 0dBm – 30dBm ± 3dB
Burst Timing	<3.69us
Spectrum due to modulation out to less than 1800kHz offset	200kHz : -36dBm 600kHz : -51dBm/-56dBm
Spectrum due to modulation out to larger than 1800kHz offset to the edge of the transmit band	GSM : 1800-3000kHz : < -63dBc(-46dBm) 3000kHz-6000kHz : < -65dBc(-46dBm) 6000kHz < : < -71dBc(-46dBm) DCS : 1800-3000kHz : < -65dBc(-51dBm) 6000kHz < : < -73dBc(-51dBm)
Spectrum due to switching transient	400kHz : -19dBm/-22dBm(5/0), -23dBm 600kHz : -21dBm/-24dBm(5/0), -26dBm
Reference Sensitivity – TCH/FS	Class II(RBER) : -105dBm(2.439%)
Usable receiver input level range	0.012(-15 - -40dBm)
Intermodulation rejection – Speech channels	± 800kHz, ± 1600kHz : -98dBm/-96dBm (2.439%)
AM Suppression – GSM : -31dBm – DCS : -29dBm	-98dBm/-96dBm (2.439%)
Timing Advance	± 0.5T

2.7 C320i Figures

3. TECHNICAL BRIEF

3.1 General Description

QSC6270 (3G disable) has all eight major functional blocks as like Figure 3.1

Figure 3.1 QSC6270(3G disable) Base band block

3.1.1 Processor

The QSC6270(3Gdisable) device integrates multiple processors on-chip: one ARM microprocessor and two DSP processors. Each processor is part of a functional subsystem:

- The micro subsystem includes the ARM926EJ-S microprocessor.
- The modem subsystem includes the QDSP4u8 digital signal processor (mDSP).
- The application subsystem includes the QDSP4u8 application digital signal processor(aDSP).

Figure 3.1.1 Processors and bus architecture

3. TECHNICAL BRIEF

3.1.2 Memory support (and LCD interface)

The QSC62x0 device has two external bus interface (EBI) ports: EBI1 and EBI2.

EBI1 supports high-speed synchronous dynamic devices. Its memory controller supports the new mobile DDR SDRAM memories with its higher bandwidth and ability to run at high clock frequencies. This interface supports the high-bandwidth, high-density, and low-latency requirements of the QSC's advanced on-chip capabilities such as the ARM9 processor, highperformance graphics, and video applications.

EBI2 is the slower speed interface intended to support memory devices such as NAND flash and asynchronous SRAM, peripheral devices such as LCDs, and the UBM receiver for multicast or broadcast reception (QSC6270 only). In addition, EBI2 is required to support a synchronous-burst AAD NOR flash to enable a NOR/DDR SDRAM memory configuration because the simultaneous mode (NOR, SDRAM) is not supported on the EBI1 bus.

The ARM926EJ-S microprocessor is a cached processor and all its accesses to external memory use burst techniques of four or eight 32-bit words when the memory region is declared to be cacheable/bufferable. To take advantage of this QSC higher performance feature, data from memories must satisfy the requirements for these burst accesses.

Figure 3.1.2.1 The memory control blocks of C320i

Figure 3.1.2.2 The LCD interfaces of C320i

3. TECHNICAL BRIEF

3.1.3 Connectivity

QSC6270 has connectivity features as below

- USB-OTG; USB LS, FS, and HS (2.0 compliant)
- I2C compatible for peripheral controls (1.8 V)
- UART: up to 4 Mbps
- Bluetooth 2.0 support via external SoC
- WLAN via external device (SDIO)
- NFC via external module (I2C)
- FM radio via external module (I2C)
- USIM, SIM, and USB-UICC support; 1.8 and 3 V
- Keypad interface
- SPI (master only) for peripheral support
- Two secure digital controllers — WLAN and secure digital (SD) cards

Figure 3.1.3 The connectivity of BL20

3.1.4 GPIOs

QSC6270 (3G disable) has 78 configurable I/O pins

Figure 3.1.4 GPIOs of C320i

3. TECHNICAL BRIEF

3.1.5 Air interfaces

The supported air-interface standards and features include: (See the RF technical description)

- ☐ GSM/GPRS/EDGE Specification Release 4 (3GPP R4)
- ☐ Enhanced GPS position location using gpsOne (with RGR6240 IC)
- ☐ Integrated gpsOne functionality, featuring enhancements by SnapTrack®, Inc., to enable a wide variety of location-based services and applications, including points of interest, personal navigation, and friend finder
- ☐ Simultaneous-GPS (processes GPS using dedicated circuitry while voice and/or data signals continue to be processed separately)
- ☐ 1024x searcher, direct facility termination (DFT) accelerator, off-chip RAM for measured data storage

3.1.6 Internal base band functions

Several baseband circuits within the QSC6270(3G disable) device provide functions that are necessary only to make the device operate properly — these functions are not generally used directly by other handset circuits and functions.

- ☐ PLLs and clock generation
- ☐ Modes and resets
- ☐ Security
- ☐ Qfuse
- ☐ JTAG/ETM

The clock block includes two PLLs, all phase-locked to the TCXO signal. These PLLs generate several different stable, low-jitter clock signals that are distributed throughout the QSC device and to external components as needed.

All the required WCDMA, GSM, GPS(only QSC6270), ARM, QDSP, and most peripheral clocks are derived in some way from the TCXO (or XO) source for their operating modes, plus the 32.768 kHz oscillator for their sleep modes

Figure 3.1.6 Clock block basic architecture of QSC6270(3G disable)

Multimedia topics are as below in QSC6270, including:

- ☐ Camera interface and video front-end
- ☐ Mobile display processor
- ☐ Additional multimedia support: video, audio, graphics, and messaging

The camera interface (CAMIF) connects the QSC62x0 device directly to a camera sensor. Typical applications include Qcamera, Qcamcorder, and Qvideophone. The CAMIF delivers the raw 10-bit Bayer pattern data (preferred) to the video front-end (VFE) that performs the required image processing (RGB-triplet generation, color-space conversion, auto-white balance, auto exposure, gamma correction, etc.) and prepares the image for capture or transmission. The QSC device also supports a YUV 4:2:2 input from the sensor (8-bit, 2:1 MUX YUV or CCIR656 YUV).

QSC62x0 device

The diagram illustrates the internal architecture and external connections of the QSC62x0 device. The internal components are connected as follows:

- status & control interface** is connected to the **aDSP bus** (bidirectional), **intr** (input), and **CAMIF control** (bidirectional).
- CAMIF control** is connected to the **status & control interface** (bidirectional), **Output buffer** (bidirectional), and receives **timing** signals from the **to/from QSC I/O pads**.
- Output buffer** is connected to the **CAMIF control** (bidirectional), **DMA bus** (bidirectional), and outputs **camera data** to the **to/from QSC I/O pads**.

The external connections to the **Camera module** are listed on the right:

Signal Name	Pin	Function
GPIO_39	A10	I2C data
I2C_SDA	B10	I2C clock
GPIO_40	E11	V sync
I2C_SCL	C11	H sync
GPIO_26	A11	Master clock
CAMIF_VSYNC	E14	Pixel clock
GPIO_25	E12	RESET
CAMIF_HSYNC	C14	Camera data (9:0)
GPIO_38	B14	
CAMIF_MCLK	F13

3. TECHNICAL BRIEF

3.1.7.2 Mobile display processor

The MDP is a hardware accelerator primarily responsible for transferring an updated image from the QSC memory subsystem to the LCD module. The transferring of an updated image is an operation that is shared between software, video processing, and graphics processing, so a common block helps to reduce redundant circuitry. The MDP is designed with the assumption that the LCD panel has an embedded LCD controller and a frame buffer. The image transfer is then the copying of the image from the QSC memory system to the frame buffer within the LCD module.

While the MDP is transferring an image to the LCD module, it can perform a final set of operations to the image. The set of operations that the MDP can perform has been chosen to maximize the efficiency of the QSC memory subsystems, typically removing two or more copy operations of the image to and from memory.

The MDP reduces redundant circuitry and offloads the ARM and aDSP from memory-transfer operations and a certain set of graphics and video operations

Figure 3.1.7.2.1 MDP-to-LCD interface functional block diagram

Figure 3.1.7.2.2 The LCD interface of C320i

3. TECHNICAL BRIEF

3.1.8 UART

- One universal asynchronous receiver transmitter (UART) port that supports low-speed, full-speed, and high-speed modes
- Serial data port communications that conform to the RS-232 interface protocol
- Used for data transport during Bluetooth operation (BTS402x™ SoC required)
- Other possible uses:
 - Test and debug
 - External keypad
 - Ringer
 - Load/upgrade system software
- Separate FIFOs for Rx and Tx
- Supporting circuits include:
 - Interrupt control
 - Clock source
 - Bit-rate generator (BRG)
 - Microprocessor interface
- Flow control is not available on UART2 (behind USIM)

3.1.9 USB

- Each USB link has a host and a peripheral; the host is responsible for initiating and controlling bus traffic
- The USB specification requires PCs to act as hosts, and other devices such as printers, keyboards, mice, etc., to act as peripherals
- USB 2.0 implementation defines three modes
 - Low-speed (LS): 1.5 Mbps
 - Full-speed (FS): 12 Mbps
 - High-speed (HS): 480 Mbps
- The QSC62x0 is compliant with the USB 2.0 specification
 - All three modes are supported when acting as a host
 - FS and HS are supported when acting as a peripheral
- The QSC62x0 has two USB controllers
 - Primary USB controller
 - Secondary USB controller
- The primary USB controller is supplemented by an integrated physical layer (PHY)

3.1.10 HKADC

The HKADC includes an analog multiplexer that selects an input for the sample and hold circuit. One of three inputs can be selected:

HKAIN1, pin R22 – an external connection that is available as a general-purpose input, though it is often used to monitor the power amplifier(s) temperature.

An on-chip connection to the power management circuit's analog multiplexer output. This allows monitoring of:

- Key power supply nodes such as VBAT, VCHG, etc.
- Multipurpose pins (when configured as analog inputs)
- A few on-chip parameters such as the die temperature or VREF

QSC6270HKADC Block diagram

3.2.2 Output voltage regulation

The QSC62x0 device includes all the regulated voltages needed for most low-cost wireless handset applications (and many other applications). Independent regulated power sources are required for various electronic functions to avoid signal corruption between diverse circuits, support power-management sequencing, and meet different voltage-level requirements. Sixteen voltage regulators are provided — all programmable, all derived from a common bandgap reference circuit.

Three major types of voltage regulator circuits are on-chip:

- ☐ Three positive voltage switched-mode power supply (SMPS) circuits
 - One boost converter (rated for 600 mA)
 - Three buck converters (rated for 500 mA each)
- ☐ Thirteen positive voltage linear regulators
 - Four rated for 300 mA
 - Six rated for 150 mA
 - Three rated for 50 mA
- ☐ One negative voltage charge pump rated for 200 mA, referred to as a negative charge pump(NCP)

Each regulator has two logic-OR input bits; a logic high at either input enables that regulator:

- ☐ A master bit that enables all regulators according to their default condition
- ☐ A dedicated bit that enables only that regulator

The master enable reduces the number of write cycles needed when switching between the phone's sleep and active modes.

Additional comments that apply to regulator functions:

- ☐ If a regulator's default condition is on, that regulator will power on automatically at QSC startup.
- ☐ The MSMP regulator must be on to allow internal communications between major functional blocks.
- ☐ Each regulator and SMPS can provide more than its rated output current, though some performance characteristics might be degraded.
- ☐ All regulated output voltages are programmable.
- ☐ All regulators can be set to a low-power mode except the VREG_USB_3P3 and VREG_NCP circuits

3. TECHNICAL BRIEF

Type/name ^{1 2}	Default conditions ⁴	Voltage range	Intended use
SMPS - boost (600 mA)	Off, 5.000 V	3.000 to 6.100 V	USB-OTG, camera flash, high-power audio
SMPS - buck			
MSMC (500 mA)	On, 1.225 V	0.750 to 3.050 V	Processor core
RF1 (500 mA)	On, 2.300 V	0.750 to 3.050 V	First stage regulator for subregulation set 1
RF2 (500 mA)	On, 1.400 V	0.750 to 3.050 V	First stage regulator for subregulation set 2
Linear - 300 mA			
MSME	On, 1.800 V	1.500 to 3.050 V	EBI circuits and external memory, pads
MSMP ³	On, 2.600 V	1.500 to 3.050 V	Pad voltage for digital I/Os
RFA	Off, 2.200 V	1.500 to 3.050 V	RF and analog circuits
GP2	Off, 2.900 V	1.500 to 3.050 V	External WLAN circuits
Linear - 150 mA			
RFRX2	Off, 1.300 V	0.750 to 1.525 V	RF receiver circuits
RFTX2	Off, 1.300 V	0.750 to 1.525 V	RF transmitter circuits
CDC2	Off, 1.300 V	0.750 to 1.525 V	Audio codec circuits
MPLL	On, 1.300 V	0.750 to 1.525 V	Digital PLL circuits
USIM	Off, 1.800 V	1.500 to 3.050 V	USIM circuits and interface
GP1	Off, 2.850 V	1.500 to 3.050 V	External Bluetooth circuits
Linear - 50 mA			
TCXO	On, 2.850 V	1.500 to 3.050 V	TCXO and XO circuits
USB_2P6	Off, 2.600 V	1.500 to 3.050 V	USB circuits and interface at 2.6 V
USB_3P3	Off, 3.300 V	3.000 to 6.100 V	USB circuits and interface at 3.3 V
SMPS - NCP (200 mA)	Off, -1.800 V	N/A	Headphone negative voltage supply

Table 3.2.2 Voltage regulator summary

1. All regulator names are based on their intended use, though some may be used to power alternate functions. For example, the USIM regulator is intended to power an external SIM card but may be used to power other circuits (or not used at all).
2. Each current listed in this table is its regulator's rated value – the current at which the regulator meets all its performance specifications. Higher currents are allowed, but higher input voltages may be required and some performance characteristics may become degraded. See the appropriate regulator sections for details.
3. VREG_MSMP powers key internal circuits and should be kept on at its default voltage setting.
4. All regulators have default output voltage settings, even if they default to an off condition.

3.2.3 Charging control

C320i use single Charger.

- Single charger has five mode like " OFF / TRICKLE / ISET / USB500 / FACTORY mode".
- Single Charger is working as ISET mode in case of CC(Constant Current), CV(Constant Voltage) mode, as USB 500mode in case of USB Charging.
- FACTORY mode is working only for Factory use.

3. TECHNICAL BRIEF

3.3 SUB SYSTEM

3.3.1 KEY PAD

C320i have a key-coder IC that supports eight sense lines, or columns, and eight keypad rows. The device scans and encodes 64 matrix – addressed keys on keypads . Key press and release events are stored in a FIFO buffer with 16 event lengths for uploading to a host processor. The event data stored will indicate the sequence of events and which keys set pressed or released.

KEY ENCODER IC

3.3.2 External memory interface

The QSC62x0 device has two external bus interface (EBI) ports: EBI1 and EBI2.

EBI1 supports high-speed synchronous dynamic devices. Its memory controller supports the new mobile DDR SDRAM memories with its higher bandwidth and ability to run at high clock frequencies. This interface supports the high-bandwidth, high-density, and low-latency requirements of the QSC's advanced on-chip capabilities such as the ARM9 processor, highperformance graphics, and video applications.

EBI2 is the slower speed interface intended to support memory devices such as NAND flash and asynchronous SRAM, peripheral devices such as LCDs, and the UBM receiver for multicast or broadcast reception (QSC6270 only). In addition, EBI2 is required to support a synchronous-burst AAD NOR flash to enable a NOR/DDR SDRAM memory configuration because the simultaneous mode (NOR, SDRAM) is not supported on the EBI1 bus.

EBI1 Features

EBI1 is a high-performance external memory interface for the QSC62x0 digital block that supports DDR SDRAM devices. Specifically, the following memory devices are supported on EBI1:

- SDRAM

- 16-bit low-power DDR SDRAM
- Minimum size per chip-select: 16 MB (128 Mbit)
- Maximum size per chip-select: 128 MB (1 Gbit, 1 k columns only)

Characteristics of the EBI1 clock are listed below:

- Maximum clock rate is 92 MHz, defined by the AMSS software.
- The EBI1 memory controller clock is synchronous to the bus clock (HCLK).

EBI2 Features

EBI2 is used to interface with slower memory and peripheral devices (NAND flash, burst NOR, LCDs, etc.).

The following EBI2 devices are supported:

- NAND flash

- 8/16 bit, single-level cell (SLC)/multi-level cell (MLC) 512/2048-byte page devices
- DMA support
- Boot-up capability from the above devices

- Burst NOR flash

- 16-bit multiplexed AAD burst NOR devices

- 8/16/18-bit (write only) LCD devices (both Motorola and Intel style)

Characteristics of the EBI2 clock are listed below:

- The maximum clock rate is 46 MHz, defined by the AMSS software.
- The EBI2 memory controller operates at HCLK/2.
- Broadcasting and multicasting (QSC6270 only, with MBP1600 IC) are based on:
 - Wideband MediaFLO™, DBV-H, and ISDB-T

Asynchronous/burst controller (EBI1 and EBI2)

The external memory controller (xmem_ctlr) forms the asynchronous/burst controller for both EBI1 and EBI2 in the QSC62x0 device. The controller is generic in terms of its software programmable options and can be customized when used for EBI1 and EBI2. This block has been enhanced in the QSC62x0 device to support 32-bit burst memories and byte masking during write operations.

3. TECHNICAL BRIEF

3.3.3 Camera Interface (2M CAMERA)

3.3.3.1 2M CAMERA

C320i Installed a 2M Pixel Camera. Below picture shows the camera board to board connector and camera I/F signal.

Camera Module Connector Pin Description

No	Symbol	Description	No	Symbol	Description

3. TECHNICAL BRIEF

3.3.4 LCD Module (LQ024Q3UX01 : SHARP)

The DM24-DSM04 model is a Color TFT LCD supplied by LG Innotek.

This main Module has a 2.4 inch diagonally measured active display area with 320(RGB) X 240 resolution.

Each pixel is divided into Red, Green and Blue sub-pixels and dots which are arranged in vertical stripes.

Main LCD color is determined with 262k colors signal for each pixel.

The DM24-DSM04 has been designed to apply the interface method that enables low power, high speed, and high contrast. The DM24-DSM04 is intended to support applications where thin thickness and low power are critical factors and graphic displays are important

GENERAL DESCRIPTION

Item	Main Display	Remark
Display Mode	Normally Black, AH3-IPS	
Viewing Direction	-	
Driving Method	A-Si TFT Active Matrix	
Input Signals	16/9Bit, CPU I/F Parallel	
Outside Dimensions	53.9mm(H) x 46.85mm(V) x 1.75mm(D)(Typ.)	
Active Area	48.96mm(V) x 36.72mm(H)	
Number of Pixels	320×RGB×240 Pixels	Note 1)
Pixel Pitch	0.153mm(H) X 0.153mm(V)	Note 1)
Pixel Arrangement	RGB Vertical stripes	Note 1)
Drive IC	S6D05A0	
Weight	11g

3. TECHNICAL BRIEF

3.3.5 Audio Signal Processing & Interface

Audio signal processing is divided uplink path and downlink path. The uplink path amplifies the audio signal from MIC and converts this analog signal to digital signal and then transmits it to DBB Chip (QSC6270). This transmitted signal is reformed to fit in GSM & WCDMA frame format and delivered to RF Chipset. The downlink path amplifies the signal from DBB chip (QSC6270) and outputs it to receiver (or speaker).

The receive path can be directed to either one of two earphone amplifiers or the auxiliary output. The outputs earphone1 (EAR1OP, EAR1ON) and auxiliary out (LINE_OP, LINE_ON) are differential outputs. Earphone2 (HPH_L, HPH_R) is a single-ended output stage designed to drive a headset speaker. The microphone interface consists of two differential microphone inputs, one differential auxiliary input and a two-stage audio amplifier.

3. TECHNICAL BRIEF

3.4 GENERAL DESCRIPTION (RF Part)

The RF platform of C320i supports four communication bands (GSM850 / GSM900 / GSM1800 / GSM1900). The all the RF blocks can be divided into two main parts, which are a GSM, and an antenna switch Mode. The simplified block diagram is shown in Figure 3.4

[Figure 3.4] Block diagram of RF part

3.5 GSM MODE

The EDGE/GPRS/GSM transceiver use a digital interface that is shared between receive and transmit data. The receive interface is based on I and Q data and the transmitter interface is based on envelop and frequency data.

The quad band EDGE/GSM/GPRS transceiver has the following general features:

Power class

GMSK low bands: Class 4 (33 dBm)

GMSK high bands: Class 1 (30 dBm)

8PSK low bands: Class E2 (27 dBm)

8PSK high bands: Class E2 (26 dBm)

Multi slot class 12 (4+4=5)

Dual Transfer Mode (DTM) class 9 (3+2=5)

Zero-IF receiver

-Polar modulation transmitter

3.5.1 GSM RECEIVER

The RF receiver designs are leveraged from previous-generation RTR devices, including the latest innovations. All ESC receiver paths are discussed in this section.

The ZIF receive signal paths support multiband, multimode applications:

Quad-band GSM:

Low-band

GSM 850 (869 to 894 MHz) and GSM 900 (925 to 960 MHz)

High-band

DCS1800 (1805 to 1880 MHz) and PCS1900 (1930 to 1990 MHz)

The on-chip receive signal paths are functionally identical for each mode (GSM or EDGE) and each band type (low or high). The external circuitry includes the antenna switch module and a filter function.

All RF Rx inputs use a differential configuration to maximize common-mode rejection, Tx isolation, out-of-band suppression, and second-order intermodulation performance. The first of two quadrature downconverters accepts inputs from two LNAs (only one is active at a time). An example application could support the following bands using these two LNAs:

GSM 1900

GSM 850

3. TECHNICAL BRIEF

The second downconverter accepts inputs from another two LNAs (again, just one is active at time) and is dedicated to GSM 900 and GSM 1800 operation.

The two downconverter outputs drive analog baseband filters and buffer circuits that are programmed to support the active operating mode's waveforms (GSM or EDGE). The analog baseband signals are then digitized by analog-to-digital converters (ADCs) whose outputs are routed to the digital baseband circuits for further processing.

Numerous secondary Rx functions are also integrated: Rx frequency synthesizers (each having their own PLL and VCO circuits), LO generation and distribution circuits, reference and clock circuits for the ADCs, and various interface, control, and status circuits. Power reduction features (such as selective circuit powerdown, gain control, and bias control) extend handset standby time.

Like the Tx LO, all Rx LO circuits are completely integrated. All received LO signals are generated by the on-chip Rx VCOs under control of their PLLs.

[Figure 3.5.1] QSC GSM receiver signal paths functional diagram

3.5.2 GSM TRANSMITTER

The RF transmitters are leveraged from previous-generation RTR™ devices, including the latest innovations. The ESC transmitter paths and Tx power-detector input are discussed in this section. It provides the zero-IF (ZIF) transmit signal paths for multiband, multimode applications:

Quad-band GSM:

Low-band

GSM 850 (869 to 894 MHz) and GSM 900 (925 to 960 MHz)

High-band

DCS1800 (1805 to 1880 MHz) and PCS1900 (1930 to 1990 MHz)

The transmit signal paths include a shared set of baseband amplifiers, a dedicated quadrature upconversion for each band-type (low and high), gain control RF amplification, and multiple output driver amplifiers for each band-type. Two GSM output drivers support one low-band and one high-band type (but each GSM band-type is dual-band). The GSM transmitters in polar PA configuration are also supported by a PA envelope control path, plus the ability to route LO signals to the transmit chains for test and calibration purposes. In linear PA configuration, phase and envelope paths are combined inside the ESC and amplified using a multistage linear PA.

Numerous secondary Tx functions are also integrated: a reference for the transmit DACs, the Tx phase-locked loop (PLL), the Tx OSC circuit, the Tx LO generation and distribution circuits, an RMS Tx power detector, and various interface, control, and status circuits.

The RF transmitter interfaces internally with the baseband circuits for its analog baseband input and status and control signaling. Power reduction features controlled by baseband circuits (such as selective circuit powerdown, gain control, and transmit puncturing) extend handset talk time. The driver amplifier outputs are routed externally to the final stages of the transmit chains, culminating with the antenna switch whose output drives the antenna.

Sophisticated Tx LO circuits implement the frequency plan and are completely integrated on-chip. All Tx LO signals are generated by the on-chip Tx OSC under the control of its PLL.

[Figure 3.5.2] QSC GSM transmitter signal paths functional diagram

3. TECHNICAL BRIEF

3.6 OFF-CHIP RF COMPONENTS

3.6.1 D5008 (FL101: FEM)

Low-loss SAW frontend module for mobile telephone system

Covering GSM850, GSM900, GSM1800 and GSM1900 bands

Integration of Tx low pass filters, switch, de-coder and diplexing network between GSM Filters

Integration of GSM850, GSM900, GSM1800 and GSM1900 Rx SAWs

Balanced outputs of all Rx ports

Integration of ESD protection at Ant port to 8kV acc. IEC-61000-4-2 (contact discharge)

[Figure 3.6.1] Block diagram of FEM

Switch Mode	Vc1	Vc2
GSM850/900 Tx	0	1
GSM1800/1900 Tx	1	1
GSM850/900 Rx	0	0
GSM1800/1900 Rx	1	0

[Table 3.6.1] Control table of FEM

3.6.2 GSM850/EGSM/DCS/PCS Dual band Transmit Power Amplifier (U101: SKY77336)

The dual band PA is operating to transmit for low band (GSM-850, GSM-900) and high band (GSM-1800, GSM1900). Operating mode is selected and controlled by the ESC6270 (GSM_PA_BAND).

Applications

- Quad-band cellular handsets
- GMSK Modulation
 - Class 4 GSM850/900
 - Class 1 DCS1800/PCS1900
 - Class 12 GPRS multi-slot operation
- EDGE modulation
 - Class E2 GSM850/900
 - Class E2 DCS1800/PCS1900

Features

- High efficiency:
 - GSM850, 52%
 - GSM900, 52%
 - DCS, 50%
 - PCS, 50%
- Small outline
 - 5 x 5 mm
- Low profile
 - 0.9 mm
- Low VRAMP current
 - 10 μ A

[Figure 3.6.2] Block diagram of GSM PAM

3. TECHNICAL BRIEF

3.7 WIFI/BT OFF-CHIP RF COMPONENTS

3.7.1 WLAN/Bluetooth (LBEH19UNBC-338)

The LG-C320i device provides the highest level of integration for a mobile wireless system, with integrated IEEE802.11 b/g (MAC/baseband/radio), Bluetooth2.0. The LBEH19UNBC-338 that is included of BCM4325 solution is supported three kind of functions. It is the one antenna structure which is supported of WLAN/Bluetooth in 2.4GHz band.

<WLAN>

The LG-C320i supports single-band 2.4GHz IEEE802.11 b/g standardization. The WLAN module which is consisted of the BCM4325 single chip device provides for the highest level of integration for a mobile or handheld wireless system, with integrated IEEE802.11TM b/g (MAC/baseband/radio). The BCM4325's integrated CMOS WLAN 2.4GHz power amplifier provides sufficient output power to meet the need of most WLAN devices. The interface between QSC6270-3G disable and WLAN module is the standard interfaces SDIO v1.2(4-bit and 1-bit).

Figure 1.1 shows the WLAN system architecture in the LG-C320i

[Figure 1.1] WLAN system architecture

<Bluetooth>

The LG-C320i provides the Bluetooth 2.1 + EDR specification. The Bluetooth module is the optimal solution for any voice or data application that requires the Bluetooth SIG standard Host Controller Interface (HCI) using a high-speed UART and PCM. The Bluetooth solution has an integrated radio transceiver that has been optimized for 2.4GHz Bluetooth wireless systems. It has been designed to provide low-power, low-cost, robust communications for application operating in the globally available 2.4GHz unlicensed ISM band. It is fully compliant with the Bluetooth Radio Specification and meets or exceeds the requirements to provide the highest communication link quality of service.

Figure 1.2 shows the Bluetooth system architecture in the LG-C320i

[Figure 1.2] Bluetooth system architecture

3. TECHNICAL BRIEF

3.7.2 FM Receiver (TEA5991)

The TEA5991 is a single chip FM stereo radio with RDS and RBDS decoder. The radio can be connected to a headphone antenna and can tune from 70-108 MHz to cover the European, US, Chinese and Japanese FM band. The radio delivers stereo audio output to an external amplifier. The radio can be controlled with a high level command based interface through a I2C or SPI-bus.

[Figure3.7.2] shows the FM Radio system architecture in the LGC320i .

[Figure3.7.2] FM Radio system architecture

10. RF CALIBRATION

10.1 Usage of Tachyon for RF Calibration and Test

10.1.1 Preparation work for setting RF cable loss

Procedure

1. Click "Hecaton.exe" in below directory to set RF cable loss on test equipment.
"C:\LGE\Tachyon\Utilities"
2. After selecting "Select File" button, select right RF cable loss file corresponding to RF cable that you use.

10. RF CALIBRATION

10.1.2 Basic Setting of Tachyon for RF Calibration & Test

[System Option Setting]

[User Model Selection]

Procedure

1. Click "Tachyon_xxx.exe" in below directory to execute Tachyon program. "C:\LGE\Tachyon\"
2. Click "System Option Setting" icon in the menu to set COM port.
Select "UART Port" that can communicate with phone in the Shield Box 1 message.
Click the "OK" button.
3. Click "User Model Selection" icon in the menu to set model configuration.
Do double-click model/buyer name that you want to calibrate and test.
Click the "Select" button.

10.1.3 Log of RF Calibration and Test

Contents

- ✓ On Running, log window is created in upper area.
It displays logs of phone commands and measurements for RF calibration and test.
- ✓ The result files are saved in below directory
 - "C:\LGE\Tachyon\Report\CalData\" : the file of RF calibration result
 - "C:\LGE\Tachyon\Report\TestData\" : the file of RF test result

11. TEST ALONE

11. TEST ALONE

11.1 Phone Test Mode

1. Enter the Engineer Menu
2. Tap 1. Device Test
3. Tap 1. Auto ALL Test

Item	Order	Description
(1) Key Press, External Memory, and SIM card Test Start	1.Key, External Memory, and SIM card Test 2. IF OK, tab "LSK" Button. It means "PASS"	☐ Key Test  External memory and SD card is inserted then Sing of "SIM Pass" and "SD Pass" is green. Press all keys for test - UP key - Down key - Right key - Left key

Item	Order	Description
(2) Sound	1. Sound On 2. IF OK, tab "LSK" Button. It means "PASS"	 Ringtone (MP3) is played regularly Press "LSK" button (Left top Key) Move to next step

11. TEST ALONE

Item	Order	Description
(3) Vibrator Test	1.Vibrator On 2. IF OK, tab "LSK" Button. It means "PASS"	 Press "LSK" button (Left top Key) Move to next step

Item	Order	Description
(4) Slide On/Off Test	1.Move Slide Up and Down 2. IF OK, tab "LSK" Button. It means "PASS"	 Slide UP status Slide Down status Press "LSK" button (Left top Key) Move to next step`

11. TEST ALONE

Item	Order	Description
(5) Camera Test	1. Camera Off 2. Camera Auto On (Preview) 3. Photo Shot by press "OK" key 4. Photo Save 5. Record video 6. Video Save 7. Call Photo If OK , Press "LSK" key (Left top Key) 8. Call Video 9. Preview 10. IF OK, tab "LSK" Button. It means "PASS"	

Item	Order	Description
(6) Loopback Test	1. Loopback On 2. Speak something 3. After 2 Sec, listen the voice 4. IF OK, tab "LSK" Button. It means "PASS" 5. The TEST END	Press "LSK" button (Left top Key) TEST END
