NOTE:1: DPx_VDD18 and DPx_PVDD Rails can be join together and remove Decoupling Capacitors and BEAD for DPx_PVDD if signal integrity for DP lanes are OK.

NOTE:2: DPA_VDD10 / DPB_VDD10 and DPE_VDD10 / DPF_VDD10 Rails can be join together and remove Decoupling Capacitors and BEADfor one rail of each pair if signal integrity for DP lanes are OK.
We also need to Change BEAD to minimum 400mA rating.

NOTE:3: DPx_VDD18 Rails can be join together as shown in schematic for Dual -Link DVI or LVDS setting and remove DecouplingCapacitors and BEAD of any one rail of the pair if signal integrity for DP lanes are OK.
We need at least 500mA Bead to supportjoin rails.
