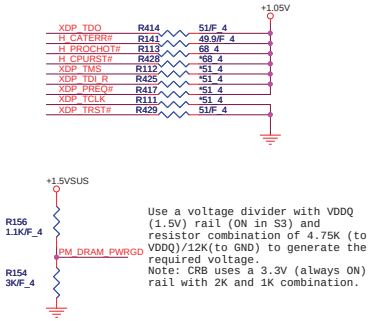
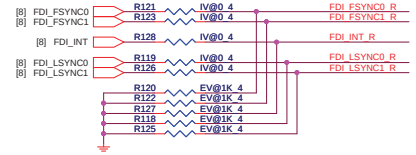
Processor pull-up



Use a voltage divider with VDDQ (1.5V) rail (ON in S3) and resistor combination of 4.75K (to VDDQ)/12K(to GND) to generate the required voltage.
Note: CRB uses a 3.3V (always ON) rail with 2K and 1K combination.



<The GFX_IMON, FDI_FSYNC[0], FDI_FSYNC[1], FDI_LSYNC[0], FDI_LSYNC[1], and FDI_INT>Note that if these signals are left as no connect, there are no functional impacts, but a small amount of power (~15 mW) maybe wasted.

The Clarkfield processor's PCI Express interface may not meet PCI Express 2.0 jitter specifications. Intel recommends placing a 3.01K +/- 5% pull down resistor to VSS on CFG[7] pin for both rPGA and BGA components. This pull down resistor should be removed when this issue is fixed.
